

Burndown:

Our burndown chart for this sprint demonstrates our improved work habits over the course of this project. Due to our group having midterm exams close to the sprint deadline, several of us decided to work on and complete our tasks earlier on. As a result, 4 out of 6 planned user stories were completed by July 15, demonstrating an improvement in our work habits compared to sprint 2, where we completed most of the tasks very close to the deadline. One user story, SCRUM-16, was left in progress at the end of the sprint. This was due to a misjudgement of the scope and difficulty of the task, and will be completed in the next sprint. Overall, we were able to stay ahead of the ideal burn rate during the latter half of the sprint, demonstrating a successful sprint.

Velocity:

Our team velocity for this sprint was similar to that of sprint 2. In sprint 2, one user story worth 3 points was not started due to a team member's personal emergency. During this sprint, one user story worth 8 points (SCRUM-16) was progressed upon significantly, but ultimately not completed due to a misjudgement on the scope and difficulty of the task. Because of this, 30 points were committed and 22 were considered complete. The remaining story will be moved to and completed within sprint 4.
