Burndown:

This burndown chart reflects the increased complexity of tasks for sprint 4. Our features centered around viewing and editing a calendar of available times, booking and accepting appointments, and updating tutor availability based on appointments accepted. These features were more complex than the ones from our previous sprints, therefore they took longer to complete. All team members began working at the start of the sprint and made progress over the 2 weeks. Ultimately, in the last few days, we were all able to complete our assigned user stories before the deadline.

Velocity:

Our sprint 4 velocity report shows that we were able to complete all story points taken on for this sprint. We committed to 28 points and completed all of them by the deadline. Reflecting on our

overall performance, our sprint 1 and 4 velocity was the best as we completed all story points that were committed. We started strongly with sprint 1, then unfortunately, unforeseen circumstances and misjudgments in the scope of a task led to lower velocity for sprints 2 and 3. Ultimately, we were able to regain our momentum in sprint 4, and ended with an overall successful project.
